

# BUSINESS INTELLIGENCE, BUSINESS ANALYTICS, WEB PORTALS AND WEB-BASED WORKFLOW

**Advanced Service Available** - Conception, design and development of production web-based portals, workflows, and services for the analyses of data and their sources, also in view of improving business performance. Use of efficient and consolidated paradigms for Project Management (AGILE methodologies, adaptive planning, progressive refinements) and for reengineering of business software and processes.

**Uses** - Use of open-source and proprietary solutions that can be integrated in production workflows, data aggregation and interpretation tools, and business intelligence solutions such as decision support systems.

**Past and Present Activities** - Conception, design, development and management of:

- National Statistic Energy Information System on petroleum and petrochemical products, coal and natural gas.
- National Informative System for the management of compulsory national security stocks.
- Acquisition and analysis system on national petroleum products data.
- Data analysis, reporting, information and communication system of petroleum products, managed by Energy Department of MISE (Italian Ministry of Economic Development), addressed to stakeholders and supranational bodies (e.g., European Community, Eurostat, and International Energy Agency).
- Data acquisition system of applications on tax deduction for energy upgrading of buildings.

**Characteristics: CUSTOM**

Thanks to its flexibility, the Business Intelligence, Business Analytics, Portals and web-based Workflow service can be adjusted to different needs and contexts.
