

EMULATIVE HOLOCONTROL IN THE INDUSTRIAL SECTOR

Innovations and Benefits - Industrial benefits for companies in terms of lower cost of the production process, greater system flexibility and greater degree of autonomy and "adaptability" of the machines.

Use - Intelligent systems with applications for the control of machines and robots used in industrial production.

Applications and ongoing Activities - The FLEX PROD project, in collaboration with the Fiat and COMAU Research Centers, has come to an end with the creation of a video inspection and pick-up system for non-reported body parts, to be applied to an existing FIAT assembly station.
