

RADIOGRAPHY AND XRF SPECTROPHOTOMETRY

Innovations and benefits - Radiography and XRF spectrophotometry allow to investigate the structure, the conservation state and the surface composition of several artifacts (wooden sculptures, canvas or panel paintings, etc.). Such investigations can be of help during restorations or the study of the execution and the conservation of the artifacts.

Uses - Characterization of artworks.

Past and present activities - Many collaboration activities are underway with the Special Superintendence for the Roman Museum Pole, Istituto Superiore per la Conservazione e il Restauro in Rome and Opificio delle Pietre Dure in Florence.

CUSTOM Thanks to its flexibility, the radiography and XRF spectrophotometry service can be adjusted to different needs and contexts.
