

# SERVICE FOR METAL-CERAMIC, METAL-METAL JOINTS

**Innovations and benefits** - This service allows to realize:

- complex brazing with particular geometries
- high-current electrodes
- loops for sensors operating in hostile environments, in vacuum or under cryogenic conditions
- heat exchangers that are highly efficient or resistant to external agents

**Uses** - Electro-mechanical equipment. Vacuum-operated equipment. Equipment operated at very high temperatures or under cryogenic conditions.

**Past and present activities** - Technology used to produce high thermal flux components for ITER.

---

CUSTOM Thanks to its flexibility, this service can be customized to meet different needs and contexts.
